

CERTIFICATE of SUSTAINABILITY

for the cultivation of silverskin onions

awarded to

VECO Groenten & Bloembollen BV

De Groene Vlieg hereby declares that the company stated above is cultivating silverskin onions in a more sustainable way by means of the Sterile Insect Technique (SIT). The SIT is a biologically-based method of pest control using area-wide releases of sterile insects to reduce reproduction in a field population of the onion fly. This will lead to the use of pesticides as little as possible and provides a more sustainable cultivation.
